**PROJECT NAME: IOT based safety gadget For child safety
monitoring and notification**

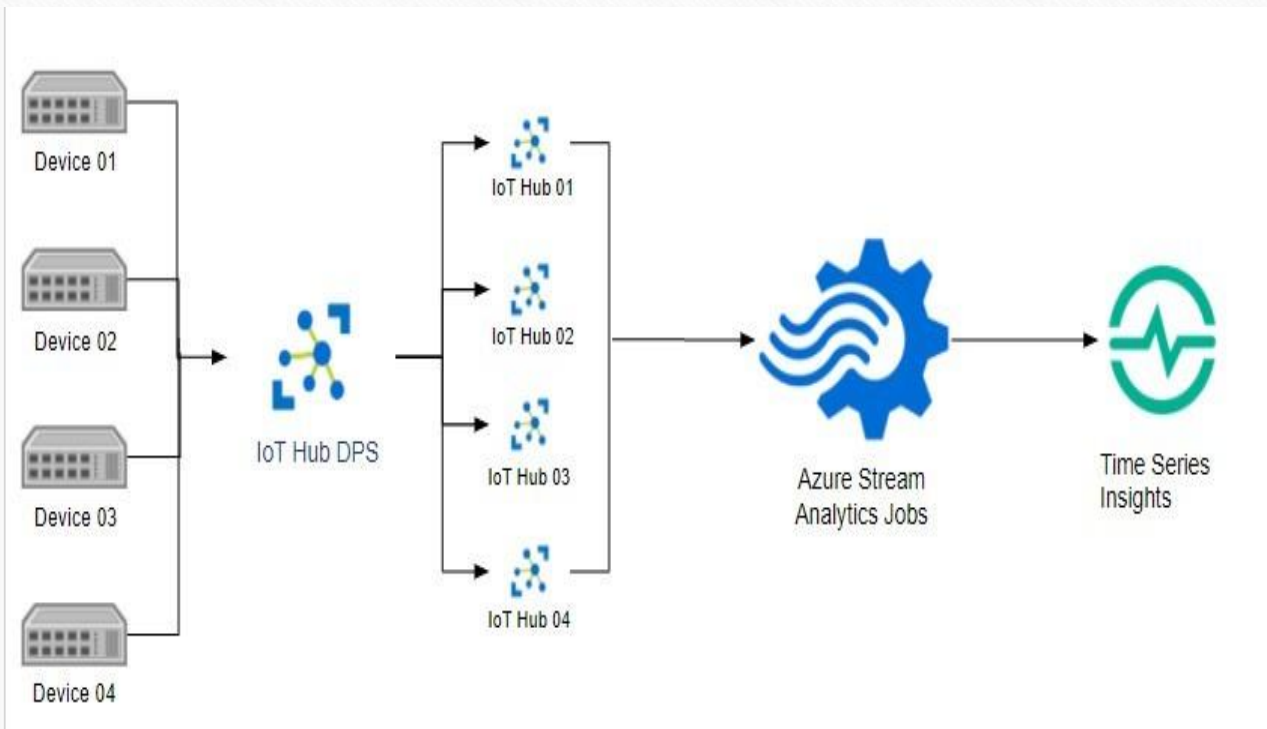

An IoT Solution is a seamlessly integrated bundle of technologies, including many sensors, that companies can purchase to solve a problem and/or create new organizational value.

Solutions Are the Solution

What the industry has been coming around to over the past few years is that **IoT Solutions are the solution.**

To repeat my above definition, an IoT Solution is a seamlessly integrated bundle of technologies, including many sensors, that organizations can purchase to solve an organizational problem and/or create new organizational value.

The most interesting part of my profession in the cloud is, there is no right or wrong design. The solution is mostly cost-effective and business-driven.

BI and access a host of different data visualization options.

- Create Power BI dashboards and reports using our Time Series Insight data, and share them with our organization.
